# MODULE 1

## Spin Rewriter variant eleven

What's more we will be talking about, we will be taking about Spin Rewriter variant eleven. Furthermore, there are a few quite huge updates, upgrades, and a couple of new highlights. Indeed, even in this, it will permit us to try and improve articles by permitting us to outwardly consider the substance to be it's been made in your articles, including adding pictures or even recordings inside your articles.

There are a lot great article that has been made by utilizing Spin rewriters' content for many sites. A lot of recordings, mass page destinations, knead recordings, essentially anything you can imagine. Most of us utilize this for and it positions then or it positioned then it positions today. So we will be provided with a little exhibit of Spin Rewriter, how well it works, how simple it works in this content.

And afterward, some portion of different highlights will be turn out that shows up with it that you might be keen on. Moreover. This will provides you with a full breakdown of Spinnery Rider as well as the upsells, and the valuing of every single one of them.

What's more, assuming you're purchasing this during send-off week, you will see the exceptional estimating accessible during send-off week too. What's more, there are some rewards you can get. One of the reward is been tossing, which is 2GB of PLR content that you can use in about any classification or specialty you can imagine. Also, you can utilize it to rework utilizing Spin Rewriter. Okay, so within this article here, you got a couple of choices here.

You can revise a solitary article. You can modify different articles. Assuming you purchased admittance to the Gold enrollment, you can get to that here, as well as the wordpress module and combination, which is astonishing. You need to go over additional insights regarding this in a moment. You can see your full chronicle of articles that you've written before.

You can join their partner program and advance Spin Rewriter. There's an instructional exercise segment here. I accept there are around ten new article which are extremely straightforward just to assist you with taking advantage of Spinner Rider. So above all else, this is an item that has been out there for some time and it's continually refreshed.

New elements are added essentially consistently. What's more, the computerized reasoning in this is simply astounding. What's more, it gets endlessly better every year. So I will go to rewrite and I've previously got an article that I got from my assortment of PLR content. Furthermore, I'm going to duplicate this at this point.

Bunches of times we don't utilize PLR content. We can use Google or Bing or Yahoo and to begin duplicating sections from various sites on a subject, glue it in here, and twist that. What's more, it works astonishingly as well. For better understanding, added a substance in which will lead you into settings. Thus it provides you with a wide range of choices relying upon the amount you need to spend on your substance.

Presently clearly the more you turn it, the less comprehensible it will be. So now and again we don't for a moment even utilize any of these choices. However, you can assume they're here by tapping the more data, it gives you subtleties and clears up for you precisely what each component does. To utilize those. Presently on the off chance that we go to Words and Phrases, you can safeguard words here.

So for specific words in your article, you don't need to change them, then, at that point, you can add those here. You can likewise consequently safeguard anything that is promoted in your article. This is an article that some are utilized some time back for VPN.

And afterward moving to Advanced Settings, we will see here where we can empower auto, a single tick Rewrite to consequently begin modifying the cycle, which makes it quick and simple. Essentially you simply glue an article and you click revise the article and it begins changing it and that is all there is to it empower hyper-speed innovation. This simply permits it to work quicker and afterward you can likewise utilize one level or staggered settled turning. So this truly turns your article, making it much more remarkable yet in addition less meaningful. So we can leave these choices how they are.

Also, before hopping down here and Snap-On Rewrite, you see several connections. So this is coordinated here with assistance called Big Content Search which has tons and huge loads of PLR articles and even digital books. Furthermore, you can straightforwardly look for them here and add the article assuming you have a membership to them. Or then again you can likewise down here fix sentence structure. So if there are issues inside your substance, you can coordinate it with this assistance called Perfect Tense and it will go through and naturally fix all your syntax issues.

So we can leave it how it is and feel free to tap on the Rewrite article. So the thing it will do is the setting up the best equivalent words for your article? It's perusing your article, its understanding it and attempting to figure out the words. So it will go through and supplant this large number of words with the most ideal equivalents. So when it turns the article, it will make it significantly clearer.

Thus check down and see the uniqueness of billions of potential renditions. Presently we additionally have more choices down here at the base. Be that as it may, you simply need to check the full article and how quickly it does this. Thus what we can do is to tap on any of these words and keep on editing this article on the off chance that we need to. So if we can click on one of these, you can see custom words, the top words, we can choose every one of the words, we can apply every one of them.

And afterward, here you can likewise channel by importance so where it attempts to see each word. So you're getting the best words added to your article that it might perhaps be. Furthermore, if you don't see your words, you can simply click on a container and add them and it will add them to your assortment of words. Presently you can likewise hover some of a few words and for instance like one to two. You can consider being a single word underlined.

So assuming you click on it gives you more choices for that moreover. You can go to Settings and what you can do here, we can ensure that these are how we need to if we need to revamp it once more and snap one, tick rework. We can save it for later or we can conclude it. What's more, its will says your article has been finished and saved to your file. You can now produce novel variants of your article beneath.

So this is our full-turned article here. Also, here's an article that it was made for. It lets us know it's 94% exceptional from the first article. You can review the article

assuming you're set up with duplicate scape, you can check it or you can present it straightforwardly on your WordPress site if you updated for this choice during your buy, which is an astonishing new component I need to discuss in a moment.

However, assuming we look back up here one thing I truly like about this and this will be accessible in the new variant eleven, which doesn't emerge until the eleventh, which is three days from now. Yet, what you can do is just scroll down, you can see the text from all the created special articles. So I can follow through with something like member advertising, get recordings and we can come through here and select a few recordings. We can add one for each article and pick chosen recordings.

We can do affiliate promoting and we can simply pick a couple of pictures, and add them. Furthermore, on the off chance if you look down, you will see there is a code pictures. Yet, by and by in the new form eleven, you will see the genuine picture here. It has many new elements that make it truly strong and significantly better to utilize, particularly to tweak your articles. Yet, on the off chance that you don't, it's no biggie.

You don't need to, you can just scroll up, continue to click Generate novel article and it will make an extraordinary article from this content each time you do this. Presently you can likewise tap on Export and you can send out the completed article and Spin message design. You can trade every novel article in its text record. You can trade interesting articles and text documents isolated by a custom article separator.

Furthermore, you can likewise send out up to 1000 articles from this Spun content. So assuming you want a lot of articles put in here, what is the number you want to send out as a compressed document? It will make that many articles from the spin article that you made. Furthermore, is the simple way to make the articles and you truly do have different choices where you can change various articles without a moment's delay.

Additionally, there is something called Gold enrollment and particularly the WordPress module. However, if you select the Gold enrollment I'm believing it's either 37 or \$47. In any case, what you can do here is you can help content on request through their assistance which surrenders you to 50 articles consistently. What's more, fundamentally what you do is you include your catchphrases and the number

of articles you need. Click Request Spin Articles and they will make them for yourself and add them here in your past articles so you don't need to meddle with tracking down the articles, turning them, or anything.

They will do it for you next, you can likewise set up a restricted admittance to represent your help so they can come in and they can get to just the pieces of it that you would need them to. You can likewise turn in a hurry with the iPhone and Android applications which are great. These have been refreshed in adaptation eleven. Additionally, you need administration for quicker turning and this accomplishes work quicker.

## MODULE 2

Here is an intriguing programming survey. Do get a little associate Commission for it. Also, it truly assists the channel. Also, you can join Gold participation where you can gain admittance to a lot of various virtual products or you can pursue only one programming that you need to utilize. Presently we're on the Prosperity website and they have a huge load of various virtual products that they make that helps subsidiary advertisers and Internet advertisers the same to find success on the web and make things quicker for them. Presently, if you've known about the best spinner, this is the product maker for the best spinner, known as one of ostensibly awesome. The name suggests the best spinner, however, it is one of the most amazing substance spinners that is at any point been made throughout recent years.

What's more, they have a wide range of other various apparatuses. We will do audits on a lot of these various programming projects. They have a watchword device. They have a great deal of SEO-related devices. So their huge market is site improvement and positioning on the web and making content rapidly, etc. So in the present video, we will be discussing this product that has been around for quite a while also. It's called Instant Article Wizard and they're continually updating their product. As may be obvious, the best merchant for form four. I accept Instant Article Wizard is on rendition four also. And afterward, you can look at the estimating down here. It depends on a credit type framework. You can get 150 credits for \$97, 300 credits for 127, or you can get 1000 credits for 297, etc. So we're feeling free to hop into the product. Presently we're in the dashboard here, right. Also, it'll have the option to let you know I have 250 credits at this moment.

What you can did here is by utilizing some watchword devices and everything. Furthermore, just head toward Google and Typed in how to do subsidiary promoting. Began scrolling down to a few additional catchphrases and then went on and just arrived on this one. Instructions to do Affiliate Marketing on Pinterest without a site. How about we find out what sort of satisfaction we can make with this. So we will make a substance inside the dashboard. Presently you should be inside the undertaking menu and presently you can genuinely basically tap on this venture's positions or the page and simply click on it. Also, presently you can make a new

position for this. However at that point now you should have a watchword. So you will have to toss that catchphrase in there. And likewise going to member promoting on Pinterest. So something to that effect is truly simple. What's more, feel free to make work just given those two. We have a truly lengthy tail catchphrase, however, at that point, you likewise have a short tail watchword.

So the product ought to have the option to pull in some great stuff. So then, at that point, presently it's handling. So you will see, it's was lined and presently its handling. The product is going out at the present moment. You can find out, it's at 69%. What's more, the status bar will change here to 75% status. Right. So it's the product is in the background. The man-made consciousness is going out there and doing a huge load of examination across the whole Internet and it will pull data for us and do all the exploration for us. What's more, that is the reason it's called Instant Article Wizard. It does all the exploration for you. So you can assemble all your substance and afterward, you can have some great you can make digital books, you can make great articles, long structure posts. Also, you will see that there are a lot of outcomes in light of those two watchwords. That is a lot to compose, a long structure article or a video, a wide range of stuff you can do. So presently once the occupation is finished and the status says total, you can feel free to tap on the dark page and it will open up our venture.

And afterward, now you have all the data in there. Feel free to click new article once you click new article, then add a tiny bit of piece of a scrutinize on it. It's somehow aggravating from the get-go, once you have content and you can go in there and begin assembling our article. It was somehow aggravating from the start. That was my most memorable time utilizing the product. As that is cool that you had the option to endure this part quite without any problem. Two credits was utilized since you had two watchwords. So every watchword will utilize a credit. Thus you can fundamentally begin, you can place your title up. Be that as it may, what it does is break it into various classes like member promoting, partner joins, associate projects, subsidiary connection, and offshoot programs here. So we have every one of this different substances that it pulled for us, right. Thus what you can do here is you could have heard blended data about partner joins on Pinterest.

So this one will discuss member joins on Pinterest. Thus to involve that piece of content in your article, you can go on and simply click that. You can put a lot of

these together and simply go down the rundown and select and you can see you're working out your article in light of how the situation is playing out here. Right. You can likewise tap on any connection here. Furthermore, it will take you over to the URL and simply push indeed, assuming you need to. If you have any desire to go to the site and look at the substance also. To see member programs conceivably here, then unique stuff will appear. Different substance. And afterward, here you can add more stuff. Right. So we will add that. Something else that you can do is we're going on and simply get this and erase it. Another thing you can do here is you can entirely make content in light of here, produce the article. It went out and created a 524-word article for us consequently.

Right. So it proceeded to make an article. You can add an introduction here. We really might utilize different virtual products or computerized reasoning programming projects to make the introduction. Yet, it will go out there and it made this lump of the article for us. Right. So several unique things we can do. So assuming I take this, on the off chance that you have the best Spinner account, you can tap on the create a turned article. Furthermore, assuming you create the turned article, it really will go out there and twist the substance. So it turns the substance for us consequently utilizing the best spinner. Also, it has its settings in there, right. So then, at that point, presently what you can do is we can take this, you will head toward duplicate Scape genuine fast, sign in to the superior record, glue into an exceptional inquiry. Thus you can see that since we didn't turn it in, you have results here. So then, at that point, what you can do is you can utilize the spinner within the product needed.

Tapped the button, the twist button. It turned the substance. Then, at that point, you approached Copy Scape and pushed search and it's not tracking down any outcomes. So it's cool. Yet, what I suggest doing is going through and perusing this since you need to ensure that it's intelligible and that it's functioning admirably for you. Right. Yet, if you don't approach the best spinner, then you might have to utilize Spin rewriter or you might have to utilize a Quill bot. So we can take this article push to erase. Presently we should simply say we ran a few additional substances here that we took scraps of. Right. And afterward, we snatch this substance. We could simply head toward Quillbot and afterward, we could glue this and do perhaps formal or standard. Also, we could simply glue our substance here and afterward do an interpretation here. It will go out there and revamp the substance for us. What's more,

whenever it's done, it's quick, you can duplicate this substance. And afterward, I would go over and check whether it's turned in enough to get an exceptional article from just Quill Bot.

## MODULE 3

Hello, folks. Burglarize Murphy from List Accounting Choices here. Presently today we're doing another application survey, and today we're taking a gander at Speechify, which is a TextToSpeech application. So what conceivable utilization of this application? So all things considered, it's convenient. Likewise, as well, assuming you're Dyslexic, you need to speed up if you're not generally excellent or for different reasons also, similar to words that you can't articulate. The point of the application is to be exceptionally useful. In any case, how great and how well does it function? So we should investigate that with this, which will be somewhat of an exhibit and survey of the application for what it's worth. So this application is in its beta stages. So I have prerelease admittance to this application just from a video advertisement that I watched, and I had the option to continue and download and get into the application. So it gives you a multi-day preliminary. From that point forward, you'll be paying around \$200 per year for the application. Is it worth the effort as well?

Is it adequate for understudies and stuff like that where you're too occupied to even think about perusing once in a while, or do you have long, enormous, commendable reports and stuff that you want to peruse? Perhaps you're taking the public vehicle and you can't have four pages around. Perhaps it is. In any case, we should hop in and see. So for this application, I have a duplicate of The Untethered Soul. You can examine that. I have changed to another book. I have a magazine and a tiny bit of cooking there. And afterward, I have quite recently a greater stylebook on getting genuine releasing legitimacy just too preliminary out to find in life how it goes, getting it done, doing what it's intended to. So when you open the application, it goes through and inspires you to do all that stuff. Yet, here we are on the home kind of page. Presently, these are articles here down the base that I've proactively attempted the application out on with fluctuating levels of progress. So you can tell on this one.

Here one of seeing your heart and your heart simply removes you from your best to low.

I surmise to secure you in size, you in size the main thing you truly enamored.

## **Welcome to Speechify.**

Simply perusing a field T. What the heck? It simply occurred there. So you can see there are a couple of little early-stage troubles with the application, however, you can see there that that one didn't exactly change over. Yet, assuming we go to Cliff Stories, I am Dyslexic.

Perusing a sentence takes me a similar measure of energy and intellectual prowess as a great many people take while addressing a four-digit long division numerical problem in their minds. I was analyzed in 3rd grade. It was the greatest day of my life. Before that, I would profess to peruse grade school, sit with a book open before me and inquire. I ponder the expressions of individuals my folks, and educators.

Hello there, I go by Glyph. Inquire. Companions sit with Quip. Think about her apathy. Perusing circles are frightening when I believe that children should peruse and it would draw nearer to me, my hands would begin to perspire so I can't get simply endlessly just before it was my personality.

I go stow away in the washroom so you can say a tad regarding how this application functions. Also, you have all various kinds of voices and dialects as well as accents, as well as having the option to pick the speed. Presently it goes off the deep end quick here in Grenade Poultry. I fail to understand where any utilization would be to anyone by any means. Ever. When you give the application consent to have the option to take photographs, you get your little photograph thing. So how about we simply open to an arbitrary page. Ideally, we have sufficient light and you get this little blue square thing that goes all around the mother trucking shop and there and we tap. Done. We let it load up a smidgen, perhaps, I don't have any idea. We will do stuff. There we go. Presently we bring it down from 3.7.

Dread isn't that we are not prepared. Our most profound dread is that we are strongly unimaginable.

It is our light.

Not our haziness, that scares us most. Ask ourselves, who intended to be splendid? All things considered, who are you not to be? You are an offspring of God.

You're playing little doesn't serve and you can see there that that one functions admirably. I was perusing along there, with the goal that one went very well. Presently we should give it a shot on a magazine that simply has a couple of plans and has various varieties on the page too. So this one will be intriguing with regards to how it deciphers out and pictures too. So done. What's more, trust that that one will stick.

Ninth Dinner Creamy Coconut Oil Sticky Pork Mince Bowser and East Coffee Prep Five Minutes Cook K. O mince. Serve four Coffs per Serve 19 Swedish meatballs with broccolini Wait Cauliflower Prep five minutes Cook 15 minutes Serves a Prep One Element's Cook 20 min serves four Cost for every Serve Dollar Eight-five to cost for each Serve \$4 at \$0.58 mining Core Two by 27 coconut milk 1% cups dried red lentils and with that one.

We can see that that was anything but a seething achievement. So given how this one is set out in its sections as opposed to the simply typical curiosity of things, I felt that that would introduce somewhat of a test for the application, and it did. In any case, you have a great deal of even awful spelling mistakes and stuff like that too in there. Anyway, forging ahead. Next, we'll go to Tweak. Get everything in there, go to the following page. Alright. Everything is skipping around there. So I don't know whether that implies that it will get that for sure it will do. Alright, I don't have any idea where it got emblematic. It got my bookmark and when I was grown-ups and it was very expected.

However, I missed Alan Justin Alaskan Air with my father when I was around nine. It's a film 139 in an auditorium on the IRA who experiences passionate feelings for a transgender I a fair run met about a man around and any drinking and hearing high seems like it was one of them.

Where in the world did it give him that? So you can see that one as well. If it doesn't get the little overlay over the thing, it goes nuts. So we'll attempt that one once more since that is quite simple to peruse, I accept. In any case, the 139 was the page number, so it's now saying that you must be exceptionally clear on the thing you're snapping the picture of and what gets found out in the edge because in any case, it cracks the damnation out of my father.

At the point when I was around nine. A film 139 and in the IRA goes gaga for transsexual. I went out wherever to gatherings and shows and whatever at the theater about envision his wraparounds with my father. Everybody drinking and gets found out. I felt like I was one of the noes I passed up. Simply a gesture to something similar with trusts. Furthermore, it was exceptionally intriguing that a ton of children kept playing with everything. Furthermore, it was mistaken that I might see my father dating, frantic. I got up one morning and rushed to and when my fathers were like, goodness, I squandered natural scents in my client under the sheets of day. It's generally heterosis things like mine.

No doubt about it that one didn't exactly function too. Presently I think the lighting in here is very sufficient, so I don't have the foggiest idea why it's not getting the disrupted soul. So give it another go with this one, which I don't believe is a hard book to peruse. It's exceptionally clear print. I'm not shaking or moving the camera that much as may be obvious. Also, we'll see what occurs with this one. Presently.

Cutters so Honda places in the IP with the silk hot T cap would run your light work on the bicycle interaction, and some of the time you will see that it feels hot inside the mat. Truth be told, assuming that you unwind into the energy of the aggravation, you might feel deciphered, warming your mischief. I notice the aggravation being unadulterated from your hair to partake in the consumption. It's known as the fire of yoga. It doesn't appear to be charming.

## MODULE 4

### Triangular Arbitrage for uniswap

So I just wanted to give you a very quick update on how the progress is going, assessing whether this triangular Arbitrage for uniswap V three is worth the time and effort or not. And so far it actually looks very promising. So you can see I've got a bunch of surface rate opportunities that are coming up here, and I've really been working more on the UI because I'm playing with this. I want to get a feel for it. I want to experience the app before I decide whether or not it's worth putting on crypto Wizards or not.

But the long story short is there are triangular Arbitrage rates coming up. So for example, this one point 77 with USDC to Wrapped, Eve, ruined to Wrapped ETH ruin to USDC is coming out at 177%. So 0.1 means a 1% opportunity, etc. Now these are just at the surface rate. So you can only take this with a pinch of salt.

For those of us who haven't seen the prior videos on Arbitrage, surface rate essentially just means what is it at face level value? At face value where you're not going into the depth yet. We've already know how we can use Uniswap Fee three SDK to actually get proper price quotes like the actual quotes. So the next stage on this will be to add a button where a user can go in, or an Explorer Hunter. Somebody's hunting for Arbitrage opportunities can go in, click on a certain button, it will go and look at the depth and spit out yes or no, right?

It'll just do that automatically. Could you automate all of that? Probably. But that's probably for a future project at some stage, if you want to work on that for yourself, if you are doing Arbitrage ever, you must make sure that you are fully in control. And there's just something about being in control.

Seeing the steps, working the steps in trading that is called semi-automatic is also a good thing. Really what I would suggest that someone like myself would do, I can't suggest you do anything, because I can't give you advice on this, and this is just for education and for entertainment. But the way you should approach it is by using Solidity, and also the Remix editor or whatever you would use for Ethereum and

actually write some test scripts to execute a trade based on these full contract addresses and potentially a Flash loan. Right. So that it would all get done sort of in one block, in one trade.

That's something I've never done before. It's probably worth doing and documenting it here on the channel just so you can see how that would actually get put together. And also, it would be a great chance for me to go back and pick up some of the solidity that I was learning as well. But regardless, I am seeing some arbitrage rates coming up here. Now, what does that mean?

I've brought up an example here of the triangle. And you can see we've got three different swaps going on. We've got USDC to Raptotherium, we've got one inch to raptorium, and we've got one inch to USDC. So the idea here with triangular arbitrage is, let's say, for example, I'm starting with USDC. I would sell my USDC to acquire Raptotherium.

Once I have my wrapped a theorem, I would sell my Rapta theorem to acquire one inch, and then I would sell my one inch to acquire USDC. So I've ended up back where I've started. And you'll notice that these coins, they all jumbled up, right? So the algorithm had to be clever enough to know, how do I assess which one I start with, which one do I end with? And the reality is it does it both forwards and in reverse.

So it's doing it this way around, but it's also doing it this way around and hopping around as well. And you will actually notice that if you do the math, if you do the calculation, you actually work out that sometimes forward might not have an arbitrage opportunity, but reverse does. And so in any triangular arbitrage tool that I've developed for this platform, it's always looking at forward and reverse just so that you know you're catching everything. So let me give you an idea of how this is working. If you refresh the page, this will be on your local machine right now.

It's not on the platform. If you go to the Crypto Wizards platform, you won't see this there because it's still in development. I will let you know if I put it on the platform. But right now, you can filter by how much liquidity or how much. I should actually call this the total value of Ethereum locked in the contract.

So you can filter whether you want that to be high, low or random. You can limit how many coins that you wanted to look through. So with triangular arbitrage, for example, if I selected 1000 coins, this would take a long time to run. And you would have to keep telling your browser that you're okay for it to keep going. It would take like two minutes to run.

If you're doing it for 250 coins, it actually takes more like seconds. And the reason is it's going through each coin and working out all the possible triangular arbitrage coins that could work with it. And then it has to calculate the triangular arbitrage. And so you're not just doing 1000 coins, you're actually doing like 1000 to the power of 1000. It's not quite that, but it's a lot.

So the limit here is going to be 1000 coins because it really doesn't make sense to have much more than that. But essentially here, let's say I want to do first of all, let's just start with 100 coins and say anything with at least 1% return potential opportunities. So when I click, it goes and it fetches that for me. So you will see there are two opportunities, one with 20% and one with 1%. Now we're not there yet because it hasn't checked the depth.

That's what I'm building in next is a way to quickly check the depth of these opportunities and then one could actually just go copy the contract addresses, put them into a script or go straight to union swap fee three and see if you can find the pools that match this to actually go and trade that. Now, again, You need to be careful here because this is for educational and entertainment purposes only, but nonetheless, it's freaking cool and I really think we should build it so that's what we're going to do. That's the next step. This, hopefully was an interesting update for you. Again.

It gives you an idea of what's happening behind the scenes. You can see that here. I'm using that same graph QL query and then here's the script to basically calculate a lot of the triangular arbitrage stuff going on over here. So that's what I'm working on. The next step now is going to have a calculate depth and the triangular arbitrage of the depth.

## MODULE 5

### IBD stock screener

We are talking about features of the IBD stock screener because it's a tool that many in the community don't usually use. And I think it's an excellent way to find the best of the best stocks very quickly.

And really that's the whole goal of screening, to find the best opportunities in the least amount of time. And I think that if you have the IBD online subscription, this is a great option. So first things first. To get to the stock screener, you want to go to menu on the main page, go to Research, and then click I. D.

Stock screener and it'll bring you right to this page. Once you go to the IBD stock screener, you will have access to any of their top list, the IBD 50 Big Cap, 20 Sector Leaders, Stock spotlight. And I particularly like the IPO leaders. If we go to that, you've got Zoom Band, DDOG Fiverr, and these high flying stocks showing great potential. And you've also got the new highs list, which is great.

When we're in a correction, these stocks are really showing something because they're breaking out into new highs. And of course, you've got the relative strength line at new highs as well. So you've got access very quickly to all of their top list. And you can also make your own over here.

And this way you can track your portfolio or stocks that you're watching. And it's very convenient. But really the main feature of the stock screener is that you can screen very quickly for the top can slim characteristics. And this really is excellent because the point of screening is to find the best opportunities in the least amount of time. And this screener is simple to use.

It's powerful and it's very fast. And before we actually move to that, if you want to know any more about any of the stocks that are showing up on the screens, all you have to do is click the symbol and over here will pop up some charts weekly, daily and Intraday. You've got the pricing, you've got the quick IBD rating scheme right

over here. And you've also got some news. And to close that, all you have to do is click this button.

And now let me show off the screening. So I'm going to move myself over to this side so we can add the screens over here. And in this video, I'm going to share with you two different screens. The first is kind of an overall canceled fundamental screen. And then the second one focuses more on recent IPOs.

So to get started, you want to create a screen right here. And I'll just use test here. And go ahead and edit this so you can name it whatever you want. And you've got a whole bunch of different options similar to Market Smith, the composite ratings, EPS rating, Rs rating.

You've got some price characteristics, volume and other. And really, this is all you need. And if you can't afford Market Smith, which is completely understandable, this is an excellent way to easily filter based on the can some fundamentals. So this screen is focused on future growth. So the first thing you should change is the current quarter EPS estimate change, and make that 25% to Max.

And also change the current year EPS estimates to 25% to Max. So quickly we've gone from over 7000 stocks to now only 269. And the goal for the screen is to get this number down to around 100, which then you can import to whatever charting software you use and really dive deep into the technical. And also, make sure that the price is over \$15.

And if you scroll down, make sure that the Rs rating is at least \$60. Let's actually bump this up to 87, which is kind of a sweet spot. And you can see you will now be down to under 100 stocks, which is much more manageable to actually look at the charts of them. You've got some great options here.

This is promising IPO. B-E-K-E Big BRP, Cal X Coupe, DQ So this screen quickly finds the best stocks that have a lot of anticipation in terms of earnings growth, which is highly correlated to stock performance. So I think that's a great place to start. You have a whole bunch of great options. Zoom Zscaler VSTO Vivo Ttwo, TSM, Tesla, of course.

So that's kind of screen number one, which is kind of a more general screen focusing on excellent growth companies. And the second one, if we get rid of all the

parameters here, is going to focus more on recent IPO. So go ahead and remove all those parameters. And this is a very simple screen. You basically go to IPO date and type in.

So this is screening all stocks from the 1 January in 2019 to the current date. And we also want to make sure that the Rs rating is at least acceptable. And for IPO, you want to do this a little bit lower because the Rs rating can be affected if they've gone public very recently.

So I like to keep this at 60. So very quickly, just with those two parameters, you've narrowed down your list to the top promising IPOs, which could become the next true market leaders. And let's actually add back the price condition here just to make it a little bit more selective. And you've got some great options here. Bill.com BNTX Beyond Meat Chewy Crowd Strike Four payments Fastly FTHM Fu two Fiverr and this is a great list to start with because as I said these are stocks with great potential and as we've seen this year these recent IPOs can really fly.

You've got Fastly Ibgo Fiverr all really outperforming the market and I think this is a great list to start your weekly watch list from. So after we've made a screen let me show you how to export into excel which then you can copy and paste into your preferred charting software. So go ahead and click down here. Once you're done with whatever screen you're making click save changes and then you can go ahead and click export and then it will export to an excel file and just click and that should bring that up. And also one more thing about the stock screener which is pretty great.

You've got dark mode which I know a lot of people are a fans of so therefore if you want it, and let move to how to copy and paste into whatever charging software you're using. So you just select all of these in the first column and would go over to TC 2000 make a new watch list and call it test and go ahead and just paste in there and let me tab this over here and quickly you can just go through here see if you like it or not and find the best opportunities both fundamentally based on Ken slim using the stock screener and also technically based on your own personal rules and preferred setups so that's pretty much. Just a quick kind of overview of the stock screener which I think is an excellent tool. If you have IBD online go ahead and check it out especially if you don't have market Smith and its screening capabilities. I think this is a great option to tidy over until you can afford that option.

## MODULE 6

Updating always and everywhere. With these words, the company Western Pips Group announces the start of sales. The new generation software product Western Pips Private Seven. This is a unique, exclusive and truly private program created for you dear clients and in many ways it was created by you. Since your requests and offers are our constant stimulus to new Horizons and new technologies for earning here and now.

All that is needed for real arbitrage trading, a set of irreplaceable strategies and all possible connection methods now available in one program. Now you are not just traders with the new technology of direct trading access to the MetaTrader servers. You are an invisible trader and your trading style will remain a mystery to the broker. Previously this technology was available only to hackers and with each new build of the terminal, it was necessary to completely recode all the algorithms. Our team has developed a new method of trading bypassing MetaTrader terminal through the TCP protocol.

Orders are sent directly from our program to the broker's server and look like manually opened transactions and that is not all due to the lack of communication with the MetaTrader terminal and the rejection of the use of advisors. The speed of order execution has improved by 30% to 50% and these are huge numbers for latency arbitrage on many brokers. An increase in the speed of order execution led to a complete lack of slippage or a decrease in it. Of course we are talking about honest brokers with real order execution. So what are the main advantages of the new generation software?

Ultra-fast trade without the MetaTrader terminal using direct access technology via TCP protocol multi terminal with unlimited possibilities for connection options fast or slowed broker. Reducing the load on the Bps and the ability to trade on a huge number of accounts simultaneously without launching the MetaTrader terminals. Combined trading between fix API and MetaTrader four MetaTrader

Fivetrader terminals, three, and two. Leg algorithms for masking and covert arbitrage between different accounts or brokers. All deals look like opened in manual mode.

Magic equals zero. The broker will not see the use of expert adviser. See transaction with manual execution marking bypassing plugins due to a new trading technique with the use of close arbitrage entry strategy. When we do not open a deal when a signal appears, but close the deal by a signal. The speed of opening deals using the new technology is 15 to 70 milliseconds faster timestamp in nanoseconds.

Ability to connect fast quotes via Itch protocol. The fastest method of obtaining data, powerful Analyzer tick quotes and much more will be implemented soon. This is a program for professional HFT traders and those who already use other products of our company. If you are still a beginner, then you should start with more simple and inexpensive versions of our products. Now you understand that this is not just an expert advisor.

This is a full featured multi terminal for trading, earning and embodiment of your ideas brokers have less and less chance to deliver detect arbitrage and now you have more time to earning take your first step to HFT technology.

# MODULE 7

## Triangular Arbitrage Step-by-Step

Welcome to triangular Arbitrage step by step, you will know how to calculate arbitrage profit given three basic currency quotations without bid and ask task. Let's take a look at an example. We have quotations from three banks and we have ¥100 million to work with. Our task is to find out if we can profit from these quotations and if so, how.

It's easier to work with a problem of this nature by visualizing it. So as our first step, we are going to draw a triangle and place the three quotations on its angle. It doesn't matter what angle we place what code. In step two, we need to identify the quoted cross rate. Since the quote provided by Bank Sea pairs 128 M to the British pound and not the US dollar, that is the quoted cross rate.

In step three, we find the implied cross rate using the other two codes.

So we multiply \$82 per dollar by \$1.6 per pound to come up with yen per pound implied cross rate. The result is ¥131.2 per British pound. In step four, we compare the coded cross rate to the implied cross rate. If the two numbers are the same, there is no arbitrage possibility because we'll be selling and buying the yen at the same price. In this example, there is a difference as indicated by the two numbers that are circled.

We therefore conclude that an arbitrage possibility does exist. Our goal is to sell the yen and buy the yen back to wind up with a higher yen amount. There are two possible ways to do that. Since Bank Seat is prepared to trade yen for pounds, we can first sell yen to Bank C £4.

We then take our pounds to Bank B and convert them to US dollars. Our last transaction will be with Bank A to sell dollars and buy yen. If we wind up with more yen than we started out with, we've made an arbitrage profits.

Another alternative would be to start with Bank A, do a transaction with Bank B, and finally with Bank C.

We can do calculations both ways and see which one of the two paths is profitable, or we can analyze the two alternatives and rule out the unprofitable alternative. Let's do our analysis. If we start with Bank A, we pay ¥131.2 to receive a pound. If we start at Bank C, we pay a lower amount of 128 y to receive a pound. Obviously we want to pay a lower amount, so we start with Bank C and not Bank A.

In step six, we sell ¥100 million to Bank C and receive 781,250 British pounds. Now we sell the Pounds to Bank B and receive \$1,250,000. We make the final transaction with Bank A and sell the dollars to Bank A to the CPN. We now wind up with a higher yen amount than we started out.

In the final step, we calculate our arbitrage profit by subtracting the initial amount from the final amount in our example. This amounts to ¥2.5 million. Had we started with bank a, we would have lost money.

# MODULE 8

## Crypto arbitrage

Here we talking about how to make money with crypto arbitrage. So this is going to be a crypto triangular arbitrage.

So first of all, what you need to do is, sign up and register your account.

So once you're done can now continue the whole process, right? So what you need to do is find the account. Then you come to this trade. Probably you have to buy a cryptocurrency. So let me use BTC to expand this.

Actually, then we can come back to this. But I have a reason for using Wreck, not BTC. Right. But anyway, they actually all boost the same actually depend on what you actually prefer. Right.

So here we're going to choose BTC compared to BTC over here. So this is BTC, right? So what you basically need to do is first of all click on this little trade icon. So once you click on it to type in the correct cryptocurrency you want to use, then you shake different Fiat currencies that has to do with that coin, right? Shake different fat currencies that to do with that coin.

So over here you can see B USD, BTC, USDC over here. You can see the prices. So if you look at this, the prices actually varies.

Now, the rate at which it varies differs depending on the pay. Right. So in case you don't know what cryptocurrency is, all this cryptocurrency that is pegged to one dollars. It means that their value is always going to be revolving around one dollars above one dollars below.

One dollars always around one dollars. So the reason I'm actually using BTC is that if you're looking at this, definitely see that BTC is actually kind of frustration very fast. And sometimes this might not actually work hard we wanted because the price moves very fast, unless you are a robot anyway. So let's just go back to under cryptocurrency after we might want to use, the rest later on, which is wreck.

Now, to me, this actually is not actually that profitable because the difference here is not actually that high. But you can go ahead and search on every other cryptocurrency you might want to use. So with that said, I think it's actually nice for me to actually tell you that this could actually reverse.

So all you're doing is making profit from these price differences from the same peg and Fiat currencies. Because basically in the eyes of the market, these two things are the same price. But obviously here it is not the same price and it could reverse at any time. Okay. So the profitability depends on number one, the amount of capital used to do it and number two, and the market movement.

Okay. So the more distinctive gets from each other, the more money you can make. And like I said, you will see this has actually come higher than this one right now. So always make sure to look out for this where you are performing your trades.

So you can go ahead and look for other cryptocurrencies to check on. You can check ETH to know if it's something you can cope with. Can see ethically be happy going into can see this one is like, well, way more than a dollar difference actually.

But whatever, you have a companion, which is so it means if you use ETH and USD. So we have ETH. ETH is a Fiat currency trading is 2504.

So let's just try using ETH because I have not actually tried using ETH before. So currently this means I you will have to sell to one and then use that appears to buy another one, which is TULG.

So when you sell to ETH. So just click on two, So this is the amount of TUS you have. So copy this as well.

Then go straight to buy ETH with TUSD. So ETH go straight to buy it with TUSD. So over here we're going to go straight to buy. So we're going to put the amount of TS you have over here.

So at the end of the day we have actually actualized 2.0. 55 ETH by the end of this whole trades. isn't that amazing? So we can actually end up spending some cash fees that's like what a dollar or two? So if we actually check how much can just copy this thing and go back to the US price.

So you can know how much you actually have to continue. So I can just put this here again and say sell and then put the amount of ETH you have. So Cassie, we actually made some profit actually from this whole trade because it actually increased. So that's actually why it was like that. So right now what we actually made is like twelve point \$68 in just this one trade and we're going to be like it gets you around highest \$2 and we're going to be less than \$10. And we can do this continuously. For example, simply sell again. Simply sell your ETH again to this amount.

You copy this, you do the same transaction again. As long as the prices are still true. As long as the prices are still true, so if the prices are no longer true, you change it. You change your strategy.

So here the ETH US has actually increased to 2536 while here is still profitable. So go ahead and then we select TUSD USD. So he will buy TUSD. Put the amount of USD we have over here.

So copy as well. Then go ahead and sell this to ETH.

So go ahead and choose that one as well. And then we buy ETH as usual. So over here you will see that your money has also increased as well. All right. So remember to just as you can see, our profitability actually decreased a lot because right now we have been in 2.01. This is because the market has actually moved a lot closer to each other. So which means we should always be careful of this.

So you should always be careful of this while doing this because the market can move closer to each other at any time. All right. So right now we've actually made money using crypto Arbitrage without even having to send anything anywhere. So let's just see how much this is actually worth in USD.

Remove the 0.1 so this is like \$15. And then after that fees could end up with \$13.

And this is actually something we made. We can make within five minutes. So isn't that cool to make like up to \$15 in five minutes or even more. Depending on the market movement.
